

# NATURAL GAS PRICE

## Winter Outlook for 2019-20

*In the Community to Serve®*

Natural Gas prices for the upcoming winter heating season (November-March) are expected to be similar to last winter. Montana-Dakota's customers can expect their bills to be approximately the same as last heating season if we experience average temperatures. The biggest factor influencing customer bills is if the weather varies significantly from average temperatures.

Natural gas continues to be the most economical fuel source for heating and water heating. Weather continues to be the main contributing factor in the amount of natural gas used in the home.

The price outlook for this year's heating season assumes no serious supply disruptions or extreme weather impacts on supply and demand. Natural gas prices are subject to monthly changes based on fluctuations in the wholesale market. Montana-Dakota continues to be committed to providing our customers safe and reliable service.

Montana-Dakota encourages customers to use energy wisely and continue individual conservation efforts. Included in this insert are energy-saving tips for the winter heating season, as well as information regarding Montana-Dakota's Balanced Billing program.

*For customers anticipating payment difficulties, call 800-638-3278 to make payment arrangements or to be directed to available energy assistance programs in your area.*

## WINTER ENERGY-SAVING TIPS

1. Install a programmable setback thermostat. This can be an effective way to control heating costs, allowing the thermostat to be set for a cooler temperature while you are away from home and at night while you are sleeping.
2. Check the furnace filter frequently and replace or clean it as needed.
3. A humidifier can help control heating costs because the moist air will feel warmer, allowing the thermostat to be set at a lower temperature.
4. Adjust register openings in the home. Remember that heat rises, so registers should be partially closed upstairs.
5. Use draperies, blinds, curtains or shutters on all windows to slow the loss of heat through the glass. Keep window coverings open on sunny days to let in the sun's warmth.
6. Rearrange furniture, placing it next to inside walls and away from windows. Avoid blocking registers with furniture, draperies or carpet.
7. Use kitchen, bath and other ventilating fans sparingly. In just one hour, these fans can exhaust a houseful of warm air.
8. Make sure the mountings on ceiling fans are snug and tight. Use clear caulking to seal any leaks or minor cracks around them.
9. Purchase inexpensive, pre-cut insulation gaskets and seal out cold air entering the home through electrical switches and outlet plates.
10. Closets and cabinets on outside walls can leak a great deal of cold air, so make sure the doors fit snugly and keep them closed.

# BALANCED BILLING

## Take the guesswork out of budgeting

Balanced Billing provides customers a way to avoid the highs and lows associated with normal monthly billing. This plan helps take the guesswork out of budgeting for your utility bills.

## How Balanced Billing works

Your monthly bill is computed by taking an average of your natural gas or electric usage during the previous 11 months and the current month's usage. Current energy rates are then applied to this average monthly usage to calculate the current payment due. Averaging your usage over the year can reduce large cost fluctuations from extreme weather conditions.

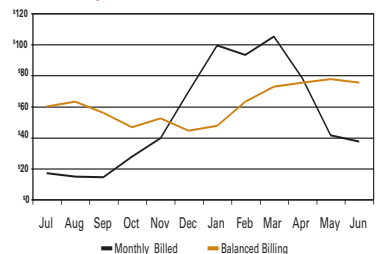

**Example:** The following graph is an illustration of how an actual MDU natural gas and electric customer's bill looks on Balanced Billing, and what it would look like without Balanced Billing.
