

NATURAL GAS PRICE OUTLOOK

WINTER 2022-23

Natural Gas prices for the upcoming winter heating season (November-March) are expected to be higher than last year. Montana-Dakota Utilities' residential customers can expect their bills to increase by an average of 25%, or \$150 over last heating season if we experience average temperatures. This increase is due to several factors: high domestic demand including electric generation and the export of liquefied natural gas that has exceeded current supply. Typically, the most influential factor affecting customer bills is if the weather varies significantly from average temperatures. **Natural gas prices are a direct pass-through and do not increase Montana-Dakota's profits.** We continue to be committed to providing our customers safe and reliable service. Detailed information regarding the winter, natural gas price outlook can be found at www.montana-dakota.com.

Natural gas continues to be the most economical fuel source for heating and water heating. Weather continues to be the main contributing factor in the amount of natural gas used in the home. The price outlook for this year's heating season assumes no serious supply disruptions or extreme weather impacts on supply and demand. Natural gas prices are subject to monthly changes based on fluctuations in the wholesale market.

Montana-Dakota encourages customers to use energy wisely and continue individual conservation efforts. Included in this insert are energy-saving tips for the winter heating season, as well as information about Montana-Dakota's Balanced Billing program.

ENERGY-SAVING TIPS

Install a programmable setback thermostat. This can be an effective way to control heating costs, allowing the thermostat to be set for a cooler temperature while you are away from home and at night while you are sleeping.

Check the furnace filter frequently and replace or clean it as needed.

A humidifier can help control heating costs because the moist air will feel warmer, allowing the thermostat to be set at a lower temperature.

Adjust register openings in the home. Remember that heat rises, so registers should be partially closed upstairs.

Use draperies, blinds, curtains or shutters on all windows to slow the loss of heat through the glass. Keep window coverings open on sunny days to let in the sun's warmth.

Rearrange furniture, placing it next to inside walls and away from windows. Avoid blocking registers with furniture, draperies or carpet.

Use kitchen, bath and other ventilating fans sparingly. In just one hour, these fans can exhaust a houseful of warm air.

Make sure the mountings on ceiling fans are snug and tight. Use clear caulking to seal any leaks or minor cracks around them.

Purchase inexpensive, pre-cut insulation gaskets and seal out cold air entering the home through electrical switches and outlet plates.

Closets and cabinets on outside walls can leak a great deal of cold air, so make sure the doors fit snugly and keep them tightly closed.

TAKE THE GUESSWORK OUT OF BUDGETING Balanced Billing provides customers a way to avoid the highs and lows associated with normal monthly billing. This plan helps take the guesswork out of budgeting for utility bills.

HOW BALANCED BILLING WORKS A customer's monthly bill is computed by taking an average of their natural gas usage during the previous 11 months and the current month's usage. Current energy rates are then applied to this average monthly usage to calculate the current payment due. Averaging a customer's usage over the year can reduce large cost fluctuations from extreme weather conditions.
